PROPOSITION H
WATERFRONT PLAN EIR
HISTORIC RESOURCES REPORT
SOUTHERN WATERFRONT

DECEMBER 15, 1994

Introduction

The impetus for this survey was the Waterfront Plan EIR, which is being prepared to review potential impacts of the proposed Waterfront Land Use Plan. In order to properly identify any adverse effects on cultural resources, it was first necessary to identify what those resources are. While many other areas of San Francisco have been well-documented. The Southern Waterfront has been relatively ignored. Only the northernmost section and the buildings at the intersection of 20th and Illinois Streets, representing the oldest area of study, have been surveyed in any fashion. Out of the more than fifty buildings and structures identified in this report, only three were rated in the 1976 DCP survey.

This document includes a Summary List of all resources surveyed, a Bibliography, and State of California Department of Parks and Recreation Survey forms. Because of the number of resources identified, only Primary Record forms were prepared except where a District was identified. In general, buildings and structures more than fifty years old were included. However, a few structures less than fifty years old are included because, in the opinion of the surveyors, they are technically, socially or artistically of interest.

Methodology

The survey area considered by this report includes all areas addressed in the proposed Waterfront Plan that lie south of Berry Street. In some places, boundaries of the plan area were exceeded by up to one block, where Department of city Planning staff and/or the surveyors thought a structure of note could be incorporated. Resources north of Berry Street will be identified by the Department of City Planning as a separate effort.

Carey & Co. first conducted a windshield survey to visually identify resources in the study area. Older structures were keyed to a survey map and photographed. Archival research supplemented the field work and was useful in establishing construction dates and other background information. Sources were obtained from the Bancroft library, the San Francisco History Room, the Port of San Francisco Archives, and the Department of City Planning. Additional material was received from David Chavez and Associates, subsurface resource consultants for the Waterfront Plan EIR.

Following completion of California Department of Parks and Recreation Survey Forms, resources were

S.F. PUBLIC LIBRARY

evaluated using National Register Criteria, and given ratings using a system defined by the State Office of Historic Preservation. These ratings were added to each form as the "NRHP Status Code." Where the eligibility of a structure was already determined, or where a preliminary evaluation resulted in a determination of ineligibility, no additional work was done, and the status of these structures was simply noted on the list of resources provided on pp. 3-7. Where the resource (structure or district) appeared eligible for listing on the National Register, an additional form was prepared, either for the district as a whole, or for the individual resource.

To assist in organizing the material, Carey & Co. divided the study into three geographical sub-areas. "Area 1" runs along Berry Street to Fourth Street; along Fourth Street to 22nd Street; and along 22nd Street to the Bay, but excludes the San Francisco Yard. "Area 2" is the San Francisco Yard complex bounded by Illinois Street, 22nd Street, Central Basin and the Bay. "Area 3" extends from Army Street along Evans Avenue to Cargo Way; along Cargo Way to Jennings Street, along Jennings back to Evans Avenue, and then to the Bay.

Summary

Fifty-three buildings and structures were identified. Twenty-four of these were concentrated in the "San Francisco Yard" District ("Union Iron Works"), centered at 20th and Illinois Streets. The remainder were scattered throughout the study area.

While the majority of Southern Waterfront structures surveyed are industrial, there are also maritime, administrative and infrastructural elements. Area 1, the northern part of the study area, contains a concentration of industrial structures along Berry Street. A variety of maritime structures, including piers, a freight ferry slip, and boathouses, are scattered along the water's edge on Terry Francois Boulevard, extending south to Illinois Street. A grouping of industrial buildings, dominated by the huge American Can Co. structure, are concentrated on Third Street between Nineteenth and Twenty-Second Streets.

The southern portion of the study area, which we are calling Area 3, has an eclectic array of structures, which include grain elevators, the streamlined bridge at Islais Creek, the Pier 84 crane structure and the PG&E power plant.

More than half the structures surveyed are in the San Francisco Yard area, at 20th and Illinois (Area 2). This concentration includes industrial and administrative buildings, as well as dry docks, piers, and slips. The oldest structures in the study area are found here.

Architecturally, the buildings are largely utilitarian structures constructed of brick, concrete or metal. Architectural enrichment is generally limited to a simple, shaped parapet. Exceptions to this simple industrial aesthetic are the Gothic revival bulkhead buildings at Pier 48, and the administration buildings at the San Francisco Yard.

SOUTHERN WATERFRONT BUILDING LIST - AREA 1

Following is a list of the 53 total surveyed structures represented with a primary record form. To assist in organizing the material, the structures are divided into three geographic sub-areas. The status code refers to the National Register of Historic Places (NRHP) status rating defined by the Office of Historic Preservation.

	<u>BUILDING NAME/ADDRESS</u>	<u>DATE BUILT</u>	<u>STATUS CODE</u>
1.	W.R. GRACE & CO. BUILDING 29 Berry (between 1st & 2nd), S. F.	c. 1918	5D3

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

Once part of a grouping of commercial and industrial structures, this small, flat-roofed, one story building now stands alone. Faded signage near the top of the facade reads WR GRACE and CO. Doors include a rolling metal door, with a narrow, solid man-door beside it. Windows are wood double-hung, on both the front and side elevations. Some window sash are missing, and the cement plaster that covers the main facade is in poor condition. Ornamentation consists of a simple, shaped parapet on the front facade, edged with square-profile raised stucco trim.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This is a Heel-Trunnion drawbridge which opened May 12, 1933. The bridge is notable for its 140 foot long, riveted steel, single leaf bascule truss in the main span. The entire structure is supported on a concrete substructure resting on driven timber piles. The prominent concrete counterbalance weights are suspended at the northern approach above the roadway. The structure appears to be in good condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

Originally an identical pair of bulkhead buildings (similar ones also stood at Pier 50 before their demolition), these two Gothic Revival buildings remain little altered, with Shed A more intact. Both are constructed of reinforced concrete, with steel trusswork supporting the roof. Exterior cladding is painted stucco, with industrial steel sash windows on both first and second floors. A rolling metal door fills the arched gable of the taller central entrance bay. The piers are topped with molded gothic ornamentation which complements the recessed vertical stucco strips in the central arch. A single flagpole tops each of the buildings above the entrance. Shed B is in better repair, but has solid paneling covering the large center transom window. Shed A's transom window is visible, but the glass is painted opaque. The sheds beyond are identical to Pier 50's, consisting of sheds constructed of reinforced concrete with a steel truss-supported roof. These long narrow buildings rest on piers supported by timber pilings. Two rectangular steel sash windows alternate with one large rolling metal door across the entire length of the buildings. These structures are in fair to good condition.

B12. Historic Attributes (List attributes and codes): HP 39; Shipping pier structure

B13. Significance: Theme Shipping industry Area San Francisco
Period of Significance 1928 - 1960 Property Type Pier bulkhead Applicable Criteria A, C
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

These Pier Bulkheads date from the Port of San Francisco's ambitious expansion of the teens and 20s, and are therefore eligible for the National Register under Criterion A. During these two decades, San Francisco rebuilt its waterfront. The opening of the Panama Canal in 1914 revitalized the shipping industry of San Francisco. The Panama Pacific Exposition of 1915, celebrating the Canal's completion, brought an influx of visitors to the City, stimulating the desire to improve and beautify its image. The Neo-Classical Pier Bulkheads north of the Ferry Building date from this period. World War I led impetus to the effort to rebuild and modernize waterfront facilities: efficient docks, piers and barrier facilities were considered essential to winning the war. During the 1920s, San Francisco found itself one of the leading centers of trade in the United States. During this decade, it nearly doubled the tonnage handled by its ports. Piers 48, 50 and 52, all double wide and double long, date from this period. All three piers also connected with expanded railroad freight lines at China Basin. Under Criterion A, these structures would be eligible as contributors to a district or thematic grouping incorporating all of San Francisco's historic Bulkhead and other pier structures.

These structures are individually eligible for the National Register as intact, finely-executed examples of the Gothic Revival style. The Gothic Revival style is significant because of its uniqueness on the San Francisco waterfront. The only other extant Gothic Revival Bulkhead is Pier 45 near Fisherman's Wharf, which has a much more simplified design. Pier 50 originally included Bulkheads identical to these, but now sports bland 1960s-vintage structures.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

Adjacent to Pier 50, this flat-roofed rectangular building is predominately two stories with a one story bay on the north side. Constructed of reinforced concrete with wood frame partitions, it was built around an existing smaller building. The bay configuration consists of nearly full height steel sash multi-lite windows between vertical concrete piers. A wide, flat unadorned parapet tops the structure. The entrance bay contains a double aluminum door and non-original full height aluminum windows. The restaurant's exterior is smooth stucco painted pink. To the rear is a deck overlooking the water. This structure is in good condition.

2301 Third Street, Parcel No. 4109-001

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

Built originally for the American Can Co., this large complex of buildings occupies the entire block bounded by Third St., Illinois, 20th and 22nd Streets. The central portion is typical of an office building. The flanking buildings are industrial in character with large steel-sash windows and loading bays on the Illinois Street side.

The flat-roofed administration building is set back from the street and semi-attached to the southern factory wing. Textured brick is the primary cladding with a concrete belt course above the ground floor and at the cornice level. The central entry is located within a small projecting square bay topped with a flagpole. The wood double-hung windows are grouped in pairs except in the center where they are arranged singly. The integrated ornament is found between fourth story windows and consists of flush, square, light-colored inserts and patterned brick rectangular drops ending in projecting telescoping concrete rectangles. These relate to similar tiled motifs on the adjacent factory sections of the building. (continued on next page)

Resource Identifier: American Can Company Building

P3. Description (continued)

The concrete-frame factory portions are dominated by bays of large steel sash windows surrounded by brick infill spandrels and piers of stuccoed concrete. The windows are a combination of fixed, double hung, and awning. The northern industrial section is four stories tall, flat roofed, with brick spandrel panels. Concrete piers, each topped by a vertical strip of terra cotta, separate the window bays.

After a mid-block, stripped down, two-story section, the southern portion is four stories tall with a projecting, bracketed brick-and-stucco cornice. End bays have low-pitched, gabled parapets, with square, stucco inserts. This motif is repeated on the brick spandrels between the third and fourth floors. This southern end may have been built before the northern end.

The entire complex appears to be in good condition.

AREA 2

State of California — The Resources Agency
DEPARTMENT OF PARKS AND RECREATION
DISTRICT RECORD

Primary # _____

HRI # _____

Trinomial _____

Page 1 of 2

- D1. Resource Identifier: San Francisco Yard
D2. Historic Name: Union Ironworks / Bethlehem Steel
D3. Common Name: _____
D4. Detailed Description (Discuss overall coherence of the district, its setting, visual characteristics, and minor features. List all elements of district.):

Located on Potrero Point, the Shipyard is built on a natural land mass, supplemented by filled land and piers. The yard contains 23 structures, dating from c. 1883 to 1945. Additionally, a variety of piers, slips and drydocks form the southern and eastern San Francisco Bay boundaries. A tall, c.1900 cast iron fence edges the yard on Illinois Street north of 20th Street. Railroad tracks criss-cross the yard.

There are three primary building types: brick masonry, concrete and metal. These are supplemented by numerous small, foundationless wooden sheds which were not surveyed. The earliest buildings at the Shipyard are brick masonry warehouse, shop and administration buildings. These include the early, industrial "Machine Shop #1," (Building 113), as well as the more refined "Office Building" (Building 104) of 1896 and the "Warehouse," (Building 111), of 1917. Concrete buildings date from the teens and the 1940s, and include both warehouse buildings and more elaborate structures such as the infill portion of Building 113. Metal buildings are the most numerous. Most have gable roofs with monitors. Many, especially those north of 20th Street, rest on five-foot high brick walls. Building 105, the "Forge Shop" on 20th Street, has an entire street facade of masonry on what is otherwise a large metal building.

D5. Boundary Description (Describe limits of district and attach map showing boundary and district elements.):

District boundaries are as follows: Illinois Street to the west, 18th Street and San Francisco Bay to the north, San Francisco Bay to the east, and 22nd Street to the south.

D6. Boundary Justification:

This boundary represents the World War II era boundaries of Bethlehem Steel and the US Navy Shipyards. Both areas have been used for iron production and shipbuilding for over a hundred years, and contain buildings dating from before the turn of the century to the 1940s.

D7. District Attributes (List major attributes and codes.): HP8

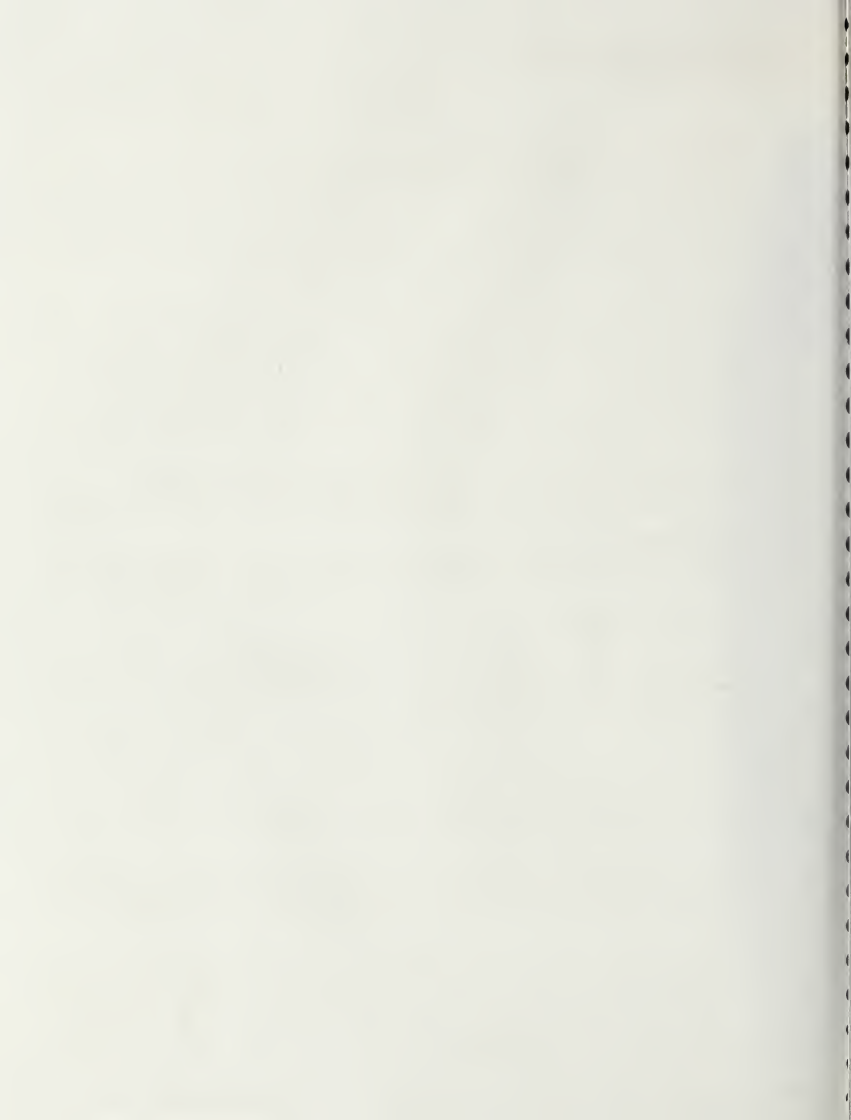

- D8. Significance: Theme Ship building Area 50 acres +
Period of Significance 1880 - 1945 Applicable Criteria A, B, C
(Discuss district's importance in terms of its historical context as defined by theme, period of significance, and geographic scope. Also address the integrity of the district as a whole.)

The San Francisco Yard is an area of both local and national significance. It is eligible under criterion A, for significant events, and criterion B, for significant individuals. Some of the buildings also appear individually eligible under criterion C, for architectural merit. The Yard is important nationally as a contributor to three war efforts: the Spanish American War, World War I, and World War II. Locally, the Yard is important as a survival of one of San Francisco's earliest industrial plants. The proposed district includes all land eventually operated by Bethlehem Steel, which, by WW II, totalled over 50 acres. This land was originally developed, and some of the existing buildings built by, Pacific Rolling Mills and Union Iron Works.

Pacific Rolling Mills located to Potrero Point in 1867 and was later bought out by Risdon Iron and Locomotive Works. Bethlehem Steel absorbed the property in 1911. Union Iron Works moved to the north side of Potrero Point in 1883, and by the 1890s, was competing with the biggest shipyards in the world. Union Iron Works provided the flagship "Olympic," that carried Admiral George Dewey to the Phillipines during the 1898 Spanish American War.

In 1902 Union Iron Works was sold to U.S. Shipbuilding, and in 1905, to Bethlehem Steel. The Yard continued under Bethlehem Steel until 1949. During Bethlehem's tenure, the Yard was a major ship provider for both World Wars. Its WW I production included 18 submarines (10 of them British) and 66 destroyers. The Yard saw even greater activity during World War II: over 2,500 vessels were repaired or converted, and 52 new ships were constructed.

Architecturally, the Yard forms a cohesive grouping of industrial and administrative buildings, none of which post-date World War II. While previous (continued on page 2)

Resource Identifier: San Francisco Yard

D8. **Significance (continued):** researchers recognize the significance of the monumental buildings on 20th Street, we urge the inclusion of the more utilitarian buildings and pier structures within the Yard itself. Without these buildings, the full story of the Yard cannot be appreciated.

See accompanying location map under building #101.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This is a classically-detailed "L"-shaped, flat-roofed three-story with basement building. It is clad with stucco, with double-hung wood windows and a corner front entrance. The primary facades are ornamentally rich. Rusticated stucco enriches the first floor facades, with granite steps and a cast ornamental surround at the entry. Windows here are paired. Between the first and second floor is a wide string course, with projecting balconies above the entry and at both end bays of the 20th Street and Illinois Street facades. Two-story fluted Doric pilasters ascend from the string course, dividing the primary facades into bays. Set within each bay, windows are in groups of three, with cast ornamental spandrel panels between the second and third floors. A wide, simple entablature tops the building, with a projecting cornice band and solid parapet. The building appears to be in good condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This tall, one-story rectangular building, with hipped, ceramic tile roof, was designed by San Francisco architect Charles Peter Weeks. The front (20th Street), and rear facades are each five bays wide, with one-bay-wide end facades. Five large, arched openings dominate the primary facade. The center, cartouche-topped arch contains the entry doors, which are paneled, and clad with galvanized metal. The remaining arches contain multi-pane wood windows with operable transoms. The building's entablature is notable for its terra cotta shell motif frieze and copper modillioned cornice. The building's interior, visible through the large openings, appears to contain most, if not all, of its original equipment. This building appears to be in good condition, except for the cornice, which is in poor condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This red-brick, Renaissance-inspired building is two stories high with a full basement and attic. It has a hipped, clay tile roof and wood, double-hung windows. Originally "T"-shaped, with the primary rectangular mass on 20th street and a projecting center bay at the rear, the rear void areas have since been infilled to create a rectangular foot print. Two-story-tall brick arches, each containing paired, first and second story windows, dominate the front (20th Street) and two side facades. These arches are set above a rock-faced, rusticated, concrete basement and sandstone waterable. Sandstone also accents the building as quoins, keystones and window sills, an upper-level string course and the building entry. This finely-detailed Renaissance portico features banded rustication, engaged Ionic columns and a projecting cornice over and arched opening. The entry recess features a coffered, barrel-vaulted ceiling and polished marble walls. A sandstone string course separates the second floor from the attic. Deeply set, paired, rectangular windows, with shouldered, molded brick and terra cotta surrounds, punctuate this level. A copper modillioned cornice, in poor condition, tops the building.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This tall two-to-three story rectangular metal warehouse building has a gabled, monitor roof. A one-story shed-roofed projection, with its own roof monitor, abuts 20th Street. This steel-framed industrial building has corrugated metal cladding and steel sash windows. The 20th Street facade is brick clad, with projecting brick piers, echoing the nineteenth century brick warehouse across the street. The remaining elevations rest on a five-foot high brick base. The building appears to be in good condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

One of the oldest extant buildings in the yard, this is a two-story, double gable, metal-clad building. Possibly built in two phases, the western portion is taller, with horizontal strip, fixed and awning steel sash windows. Covered skylights are visible on the roof. The eastern portion has individual double-hung windows and a second story loading door with crane. This eastern mass appears to be earlier than the western, however, the steel sash strip windows on the western half of the building, as well as the corrugated metal cladding, may be modifications. Wooden rafter ends are visible at the gable-end eaves. The building appears to be in fair to good condition.

See accompanying location map under building #109.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This is a 480' long, one-story metal warehouse, essentially rectangular, with a slight "L" at the eastern end. It is clad with corrugated metal and has steel sash windows. The building has an irregular roof line. At the eastern end, it forms a double sawtooth, with a shed roof over the "L" extension. The western end has a flat roof with several wide, glazed monitors that run the width of the building. This feature appears to relate to the building's function as a "plate shop," since a second such structure, "Plate Shop #2," has a similar roof profile. The building appears to be in fair to good condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This four story, rectangular, finely-detailed brick building has a flat roof and extensive glazing. The first floor is high, and topped by a wide, cast belt course. Openings on this floor have arched heads, with terra cotta keystones and imposts. At the northern end of the structure, a mezzanine creates a second story. This area appears to be designed as office space, with wood, two-over-two double-hung windows and paneled spandrel panels between the two levels. At the southern end, the arched window openings contain steel sash panels with some operable awning sash. The three floors above are uniforms, with wide rectangular steel sash windows. An arcaded cornice tops the building. The brickwork on this building is of very high quality. In addition to the cornice detailing, header courses run vertically up both sides of each pier. Rowlock courses run at toe top of each window. Diagonally placed bricks form diamonds, centered in each spandrel panel at the third and fourth floor level. The building appears to be in excellent condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This 450 foot long structure consists of two original brick structures, dating from 1886, connected by a c. 1914 reinforced concrete infill structure. Both brick structures have gable roofs, projecting piers, arched windows and simple corbeled cornices. The western structure, the original machine shop, consists of one wide (nine-bay) gable and two three-bay gables. Windows are steel sash, with both large, single arches filling the bays and, on 20th street, smaller arched windows in groups of three. The eastern structure is a single gable wide, and originally housed the bolt and rivet shop and the erecting shop. Detailed similarly to the western portion of the building, this portion has large, single-arch-per-by metal sash windows. The connecting structure is similar to the steam powerhouse across the street, with which it is roughly contemporary. It is classically detailed, with a large, arched center opening and flanking steel sash windows. Cast cartouche ornaments top each of the four piers, and a dentilated cornice tops the structure. This structure appears to be in good condition.

c. UTM: USGS Quad _____ (7.5/15) Date _____; Zone _____ mE/ _____ mN

d. Other Locational Data (e.g., parcel #, legal description, directions to resource, additional UTM's, etc., when appropriate):
See accompanying location map under building #116.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

These reinforced concrete warehouse structures have a strong, industrial-modernist aesthetic, characterized by expressed structure, with expansive steel sash window infill. The gable roofs have squared parapets at the gable tops. Beneath two of the gables are ventilation grilles. Monitor skylights are visible on the roof. On the west facade, the words "Pacific Coast Steel Corporation" are painted on the center gable. A corrugated metal shed-roofed addition abuts the south end of the building on the west side. The building is in fair condition, with many broken or missing windows.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This small wood and concrete structure is 25' long by 16' wide by 16'-8" high. It has a ceramic tile hipped roof and a wide, marquis-type overhang on the south, 20th Street facade. A similar overhang once protected the north facade; however, this elevation is now enclosed. A similar structure once stood at the opposite side of the gate. This building appears to be in good condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This is a Bauhaus-inspired, four-story rectangular structure with a flat roof and two-story, glazed entry feature. The building stands adjacent to a retaining wall at Illinois Avenue, with two stories above street level at Illinois Avenue, and the main entry at the third floor. The building entry is approached by a bridge from Illinois Avenue, flanked by plain, six-foot high stucco walls. The door is now plywood-covered, but appears to have been a double entry door with transom above. The door surround is faceted, with a simple, projecting overhang above. A glazed, two-story, bevel-corner stairhall stands behind the entry door, dominating the facade. Horizontal-paned, vertical wood window sash form the cladding of this stairhall. The body of the building, extending north from the entry, is a simple, stucco-clad, rectangular block. The double hung windows are arranged in groups of two or three, with simple, horizontal bands of scored stucco relief. The building appears to be in fair condition.

Official Name: Levon Hagop Nishkian Bridge

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This streamlined steel-riveted drawbridge features bridge supports which terminate in an upturned, low, quarter-circle. The steel center lane-divider exhibits a similar, simpler version of the bridge rails.

The small, two-story, elliptical bridge control house on the northeast side is constructed of concrete, green glass, and copper. The lower story is solid concrete except for a small horizontal strip window. A projecting porch surrounds the second story, which features angled, green glass windows and a flat roof topped by a large light fixture. This structure appears to be in good condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This rectangular glazed-brick firehouse is two stories tall, with a one story portion to the northwest. The first story near the southwest corner houses two rolling metal doors surrounded by scored painted stucco. These doors are flanked by two large metal and red glass lantern sconces. A main arched entrance door surrounded by scored stucco appears on the north elevation. The northwest wing has large arched windows and a flat roof hidden by a parapet. Windows are wood double-hung units, some arched and some squared. The Flemish bond brick cladding is accented with dark glazed bricks, soldier courses surrounding the windows, and a dentilled cornice. The building appears to be in good condition.

B13. Significance: Theme Firehouses Area San Francisco

Period of Significance 1927- Property Type Firehouse Applicable Criteria C

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This firehouse has architectural merit as a 1920s interpretation of the Romanesque style, as well as for its well-crafted brickwork. While the building does not appear to be significant enough for individual listing on the National Register, it would merit inclusion in a thematic grouping of San Francisco firehouses.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

The grain elevator complex consists of two side-by-side, similar facilities connected by a high bridge at the west end. The shorter, older, southern structure begins with a tall, concrete, flat-roofed rectangular tower block, approximately 100' tall. Various-sized steel sash windows glaze the top three stories. Extending east stand two separate groupings of 21 attached solid vertical cylinders, (7 long by 3 wide), approximately 80' tall, with a rectangular-windowed flat-roofed structure topping each set. This structure was built in 1950, with the second set of cylinders installed in 1953.

The northern structure features a similar, approximately 130' concrete tower block, with steel sash windows predominately in the top section. Extending east is a cluster of 21 attached concrete cylinders. Atop this northern, taller tower block, at the flat roof, a hoist is mounted with cables hanging near the larger loading openings. To the north of both buildings is a series of steel conveying platforms, supported on skeletal steel towers, each with stair access. The structures appear to be in good condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This small, square, two-story office building is located west across a parking lot from the grain elevators. Constructed of wood-frame and finished with stucco, it has a flat roof hidden behind a parapet. Windows are regularly spaced, double hung (2/2) wood with horizontal muntins. The entrance, on the east elevation, consists of a slightly raised and projecting bay with a single wood door with a transom above. A shallow, unadorned recess is above the door. Two five-inch-wide bands constructed of four, half-round wooden strips adorn and encircle the building at the second story and roofline. The structure appears to be in good condition.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

This large two-to-three story structure is constructed of concrete with painted cement plaster. It has a flat roof, and a steel smokestack attached to the northeast. Corners project on the north and west elevations. The north projection is one bay wide and has a large vented arch with three small vented openings above. The west side has two, narrower, closely-spaced arched vented openings, each topped with three small rectangular vented openings. This same bay pattern is repeated on the three visible sides. A rolling metal door opens on the west side. Additions extend to the south and west. Two small, one-story concrete buildings with steel sash windows are also visible nearby. The structure appears to be in good condition.

APPENDIX 2: NRHP STATUS CODES

This appendix explains the codes that should be entered in the "NRHP Status Code" field in the header of the Primary Record when an evaluation of a historical resource is completed. The codes found here represent a short list of the most frequently used status determinations, selected from a more extensive list that is available from the OHP on request. Be sure to read the entire list before deciding on the one to use. Take special care that evaluations for districts and their components fit together properly. Note that districts themselves are given "S" ratings, while contributors receive "D" ratings. Thus, a district judged eligible for the National Register is rated "3S," and the district's contributors are rated "3D."

The initial number in a code indicates the general status:

1. Listed in the National Register.
2. Determined eligible for the National Register in a formal process involving federal agencies.
3. Appears eligible for listing in the National Register in the judgment of the person(s) completing or reviewing the form.
4. Might become eligible for listing.
5. Ineligible for the National Register but still of local interest.
6. None of the above.
7. Undetermined.

Each general status is divided into more specific codes such as:

1. Listed in the National Register:
 - 1S. Separately listed.
 - 1D. Contributor to a listed district.
 - 1B. Both 1S and 1D.
2. Determined eligible for listing in the National Register:
 - 2S1. Determined eligible for separate listing by the Keeper of the National Register.
 - 2S2. Determined eligible for separate listing through a consensus determination by a federal agency and the State Historic Preservation Officer.
 - 2S3. Determined eligible for separate listing by a unit of the National Park Service other than the Keeper of the National Register.
 - 2D1. Contributor to a district determined eligible by the Keeper.
 - 2D2. Contributor to a district determined eligible for listing through a consensus determination.
 - 2D3. Determined eligible for listing as a contributor to a district by a unit of the National Park Service other than the Keeper.
 - 2B1. Both 2S1 and 2D1.
 - 2B5. Determined eligible by more than one method listed above.

3. Appears eligible for listing in the National Register:
 - 3S. Appears eligible for separate listing.
 - 3D. Contributor to a district that has been fully documented according to OHP instructions and appears eligible for listing.
 - 3B. Both 3S and 3D.
4. Might become eligible for listing:
 - 4S. May become eligible for separate listing in the National Register when one of the following occurs (use the code for the most important reason if more than one applies):
 - 4S1. The property becomes old enough to meet the Register's 50-year requirement.
 - 4S2. More historical or architectural research is performed on the property.
 - 4S7. The architectural integrity of the property is restored.
 - 4S8. Other properties, which provide more significant examples of the historical or architectural associations connected to this property are demolished or otherwise lose their architectural integrity.
 - 4D. Contributor to a fully documented district that may become eligible for listing when (use the code for the most important reason if more than one applies):
 - 4D1. The district becomes old enough to meet the Register's 50-year requirement.
 - 4D2. More historical or architectural research is performed on the district.
 - 4D7. The integrity of the district is restored.
 - 4D8. Other districts, which provide more significant examples of the historical or architectural associations connected to this district, are demolished or otherwise lose their architectural integrity.
 - 4B. May become eligible both for separate listing in the National Register and as a contributor or potential contributor to a fully documented district that may become eligible for the National Register.
 - 4R. Meets both of the following conditions: 1) Is located within the boundaries of a fully documented district that is listed in, determined eligible for, or appears eligible for the National Register; and 2) may become a contributor to the district when it is restored to its appearance during the district's period of significance.
 - 4X. May become eligible as a contributor to a district that has not been fully documented.

5. Not eligible for National Register but of local interest because the resource:
 - 5S1. Is separately listed or designated under an existing local ordinance, or is eligible for such listing or designation.
 - 5S3. Is not eligible for separate listing or designation under an existing local ordinance but is eligible for special consideration in local planning.
 - 5D1. Is a contributor to a fully documented district that is designated or eligible for designation as a local historic district, overlay zone, or preservation area under an existing ordinance or procedure.
 - 5D3. Is a contributor to a fully documented district that is unlikely to be designated as a local historic district, overlay zone, or preservation area but is eligible for special consideration in local planning.
 - 5B1. Both 5S1 and 5D1.
 - 5N. Needs special consideration for reasons other than the above.
6. None of the above:
 - 6W. Removed from listing by the Keeper of the National Register.
 - 6X. Determined ineligible for listing in the National Register by the Keeper of the National Register.
 - 6Y. Determined ineligible for listing in the National Register through a consensus determination of a federal agency and the State Historic Preservation Officer.
 - 6Z. Found ineligible for listing in the National Register through an evaluation process other than those mentioned in 6X and 6Y above.
7. Not evaluated.

APPENDIX 8: NATIONAL REGISTER CRITERIA AND CONSIDERATIONS

Criteria for Evaluation

The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:

- A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
- B. That are associated with the lives of persons significant in our past; or
- C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. That have yielded, or may be likely to yield, information important in prehistory or history.

Criteria Considerations

Ordinarily cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieve significance within the last 50 years shall not be considered eligible for the National Register. However, such properties will qualify if they are integral parts of districts that do meet the criteria or if they fall within the following categories:

- A. A religious property deriving primary significance from architectural or artistic distinction or historical importance; or
- B. A building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or
- C. A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life; or

THE UNIVERSITY OF CHICAGO
DEPARTMENT OF THE HISTORY OF ARTS
AND ARCHITECTURE
AND THE MUSEUM OF ART AND ARCHITECTURE

TEL: (312) 937-1234
FAX: (312) 937-1234
WWW: www.uchicago.edu
E-MAIL: history@uchicago.edu

- D. A cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events; or
- E. A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or
- F. A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or
- G. A property achieving significance within the past 50 years if it is of exceptional importance.
